Where's it come from ?

History

- Data silo at LinkedIn company
- Co-developed by : **Jay Kreps**, Neha Narkhede and Jun Rao
- Open sourced since 2011
- Latest version : 3.6.1

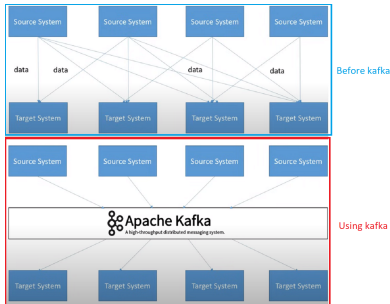

What is it ?

kafka (distributed streaming platform)

distributed : kafka runs as a cluster that can span multiple servers or even multiple data centers

streaming : allows for the developpement of realtime event-driven applications

note : kafka is behind modern day cloud application, users expect a real time experience

@ Stephane Maarek [5]

What is it ?

kafka (distributed streaming platform)

distributed : kafka runs as a cluster that can span multiple servers or even multiple data centers

streaming : allows for the developpement of realtime event-driven applications

Some use-cases

- Uber : location update in real time
- Netflix : Messaging system, activity tracking
- Linkedin: data gathering to make better connection recommendation in real time
- decoupling system dependencies

 - Using python

Broker

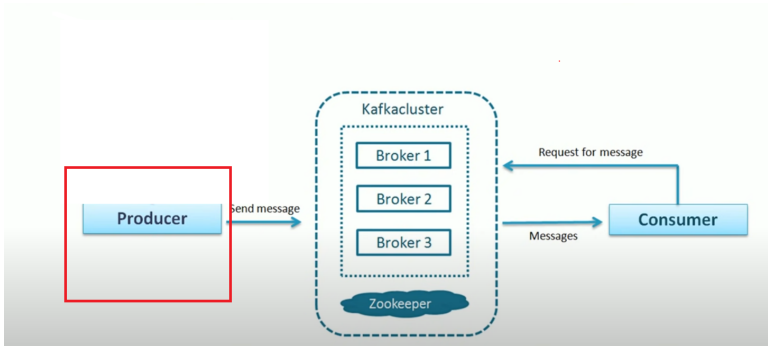

Broker is the kafka server, it's receive and store data

@ learning journal [4]

Producer

Producer sends stream of records or events

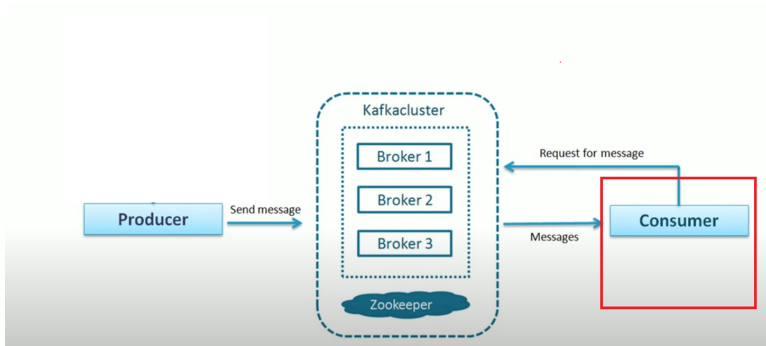

producer has property (acks = [0 | 1 | all])

@ learning journal [4]

Consumer

Consumer reads or ingests data from the broker

@ learning journal [4]

consumer group are a group of consumers acting as a single logical unit

Kafka

Message's transmission (topic)

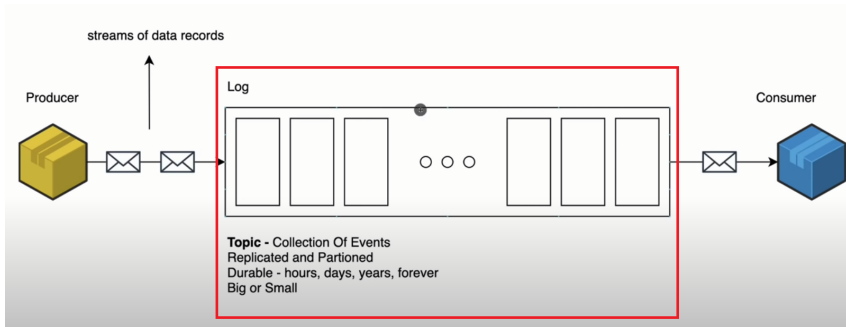

@ learning journal [4]

note : messages are store in durable way with retention characteristics

Topic

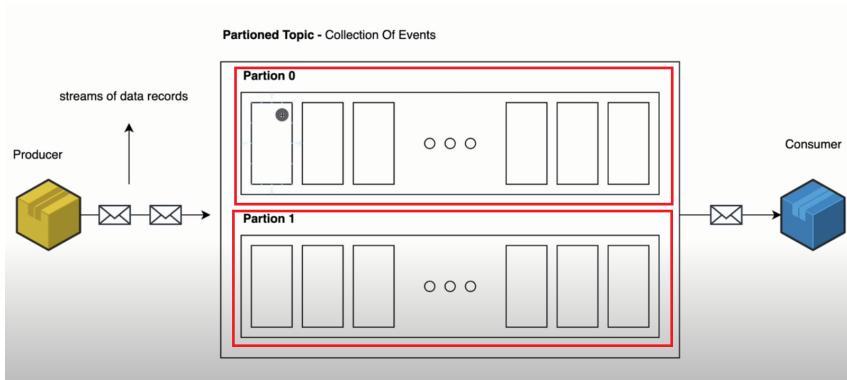

Topic (or logs) ordered sequence of events

@ amigoscode [1]

Partition

Partition reads or ingests data from the broker

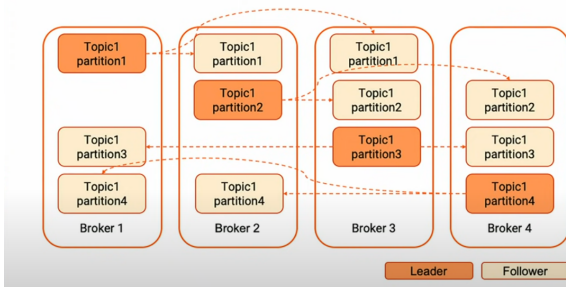

@ amigoscode [1]

remarque : at the consumption, kafka read data in partition1, partition2, partition3, ..., (etc)

Partition

Notion of leader and replicat

Partition Leadership and Replication

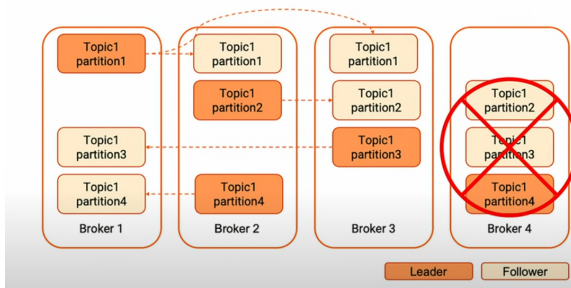

@ devoxx FR [3]

Partition

Notion of leader and replicat

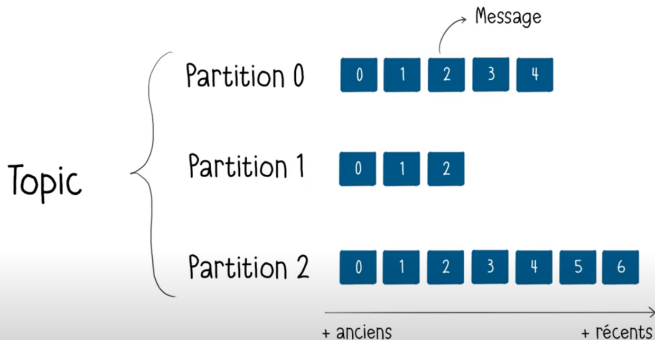

Partition Leadership and Replication - node failure

@ devoxx FR [3]

Partition

Offset

@ cookie [2]

 kafka.

Some Characteristic of kafka

- Fast
- High accuracy
- Ordered
- Fault tolerant

Some Characteristic of kafka

- Fast
- High accuracy
- Ordered
- Fault tolerant

Advanced concept (API)

- kafka connect : for data integration
- kafka streams : data processing and transformation (grouping, enrich, filtering, aggregating)

 - structure
- 4 Demo
 - quickstart
 - Using python

Quickstart

[click on the link](#) : apache kafka

Python library

Available libs

- confluent-kafka
- python-kafka

Comparison

	Confluent-kafka	python-kafka
Installation and configuration	-	+
Performance	+	-
Feature completeness	+	- (only essential feature)
Maintainability and support	+	-
